Recording and Analysis of Corporate Communications via the Cloud

Highlights
What you can expect.

1. Legally compliant communications recording for companies and contact centers
2. Workforce optimization including analytics for contact centers, financial institutions and public-safety organizations
3. Seamless integration of complex infrastructures via APIs
4. Quick and competent implementation and support
5. Always up to date, fail-safe and flexibly scalable

Speech Recording Made to Last

Volatile markets and shorter product cycles present a tremendous challenge for global players as well as small and mid-size companies.

Cloud solutions are the answer! We have developed neo for service providers requiring safety and availability. We offer evidence-proof recording and quality management as a service for you or your end-customers.
ASC’s Cloud Solution for Service Providers
Offer evidence-proof recording and quality management as a service

Your Advantages

Recording and WFO via the Cloud.

1. Multi-tenancy
   Configuration of any number of tenants on one platform and storage unit.

2. Redundancy and safety
   High-availability architecture and features such as tenant-specific data encryption guarantee fail-safe operations.

3. Flexibility
   Easily increase capacity and add new features; white-labelling; support of pure Cloud, hybrid or on-premise scenarios.

4. Easy to handle
   Automated user configuration and reporting as well as user-friendly administration via web interfaces or APIs.

5. Competent support
   Customization for unique requirements as well as professional implementation and follow-up support by ASC’s Cloud experts.

Cloud Solution for Service Providers
Our neo Recording and WFO suite lets you add evidence-proof recording and quality management as a service to your portfolio. We offer a simple delivery model to extend your market reach.

Compliance Recording
Since 1964, ASC has offered communications solutions encompassing innovative recording systems to meet our clients’ highest demands. Our neo Recording suite captures, saves and archives all communications with comprehensive index data across all channels (phone, email, screen, video, chat) for companies and contact centers.

Workforce Optimization
Customers provide companies with essential information in many ways. Our workforce optimization software, INSPIRATIONneo, captures this information and offers a wide range of tools to assess it. Through synchronized recording of calls and screen activities, services, campaigns and products can be analyzed, and the results of these analyses can then be visualized in user-friendly reports. Additional tools for the management of processes, eLearning, speech and desktop analytics and staff planning can be added via the Cloud as needed.

Maximum Security
The security of customers’ data is of utmost importance especially when saved in the Cloud. Professional encryption methods and comprehensive management of access rights guarantee the protection of this sensitive information. ASC’s software meets extremely strict national directives on data protection.

Multi-Tenancy
ASC’s neo suite has been specifically designed to meet the requirements of the Cloud and offers unrestricted immediate access to all applications. The flexible management of multiple tenants enables the addition of new tenants to the system while keeping their data strictly separated.

About ASC
ASC is a worldwide leading software provider of omni-channel recording, quality management and analytics addressing all enterprises with recording needs, especially contact centers, financial institutions and public safety organizations. ASC records, analyzes and evaluates interactions across all media, either as an on-premise or Cloud solution. Headquartered in Germany and with subsidiaries in the United Kingdom, France, Switzerland, the United States, Brazil, Japan, Singapore, Hong Kong and Dubai as well as a worldwide service network, ASC is a powerful global player in its industry.
